Id	Date	Description
1	15/02/2023	Initial drafting of the individual analysis report.

Introduction

The following analysis report provides a comprehensive overview of the various approaches that were considered in meeting the requirements of my individual document..

This report may not be as extensive as others, this is due to the fact that the requirements had relatively straightforward solutions.

This report is an essential tool for tracking my progress and ensuring that I remain committed to achieving success for my team. By regularly reviewing and updating this document, I can evaluate my progress and adjust my approach as needed.

Contents

Our team prioritized the completion of mandatory tasks, and I was no exception in following this approach. However, we encountered significant challenges when it came to setting up the necessary components for the second task of our group deliverable, which was also mandatory.

Specifically, we encountered difficulty connecting our GitHub repository with Eclipse, and despite multiple attempts, we were unable to establish a successful connection. I tried to repeat everything from scratch and eventually succeeded in connecting the repository with Eclipse.

Once this issue was solved I focused on doing the only mandatory task stated in the individual document without problem. I added a certain tag on menu.jsp that will redirect a user to my favorite website which is Wikipedia. Then I added a line of code both in menu-en.i18n and menu-es.i18n that added my personal info to the bottom.

After completing all other pending tasks, the only thing left was to prepare the necessary reports. We began with the charting report, which was mandatory. Once we had finished with this report, we moved to the group reports left, all of which were worked on collectively. Lastly, after the successful completion of these group reports, I focused on my individual reports.

Conclusions

Regarding my performance during this deliverable, I am pleased with the outcome. As a team, we successfully met all the requirements and overcame the significant challenge of starting up the project.

Our decision to prioritize the group requirements of the project proved to be an excellent strategy. Completing the group requirements first provided a solid foundation for the creation of individual reports, making the entire process faster and easier.
