Revision Table

Id	Date	Description
1	14/02/2023	Initial drafting of the analysis report.
2	15/02/2023	Final touches to the report

Introduction

This analysis report serves as a vital instrument for tracking my progress and ensuring that I stay steadfast in achieving my goals. By routinely reviewing and enhancing this document, I can effectively assess my advancements and modify our methods, as necessary, to keep me on track towards success.

Similarly, this report provides a detailed account of the tasks I undertook to meet the initial objectives for the first deliverable of the Design and Test 2 course. It serves as an excellent starting point to track my progress and document the workflow I followed to complete it. It provides a comprehensive overview of the processes and strategies employed in the deliverable's execution, facilitating easy reference and evaluation of the work done. The report also offers a means to identify areas for improvement and opportunities for optimization in the future.

Contents

The tasks for this deliverable I decided to do where all of the proposed ones, which in this case where these 3:

Functional requirements

- 1) **[MANDATORY]** Modify the anonymous menu so that it shows an option that takes the browser to the home page of your favourite web site. The title must read as follows: "`{id-number}`: `{surname}`, `{name}`", where "`{id-number}`" denotes your DNI, NIE, or passport number, "`{surname}`" denotes your surname/s, and "`{name}`" denotes your name/s.

Managerial requirements

- 2) Produce an analysis report.

[]

- 3) Produce a planning report.

[]

- 1) For the first mandatory task I had to already set up the project in my personal laptop and ensure that all the technologies specified in the theory were working properly. Then, in particular for the development of the requirements I needed to have some previous background on the structure of the given projects, so I decided to run them all and dive in a little bit more into the code itself. Once all this was done, it was time to develop this requirement itself. So, since this included changing the anonymous tab of the welcome page I had to go to the fragments folder inside `src/main/webapp/WEB-INF/views/` and change the respective `menu-en.i18n` and `menu-es.i18n` in order to add another entry in the anonymous tab with the data provided in the requirement. Finally, I had to modify the `menu.jsp` file in the same folder to change my entry to link to my favorite page, which in this case is `leetcode.com`.
- 2) In order to ensure that this specific requirement was met, I carefully reviewed the instructions provided in the "08 Annexes.docs" document that pertained to this report. I took the time to thoroughly document the process, using what I believed to be the most accurate and relevant information, in order to maintain a comprehensive record of my work on this deliverable.
- 3) In order to meet this particular requirement, I consulted the detailed instructions provided in the document titled "08 Annexes.docs" for the Planning Report. By utilizing the time tracking tool Clockify, I was able to effectively manage my work and successfully deliver the precise data that was requested in the requirement description. It was crucial for me to closely follow the guidelines outlined in the Annexes document, and I found that Clockify was an excellent resource that helped me stay organized and on track.

Conclusions

After completing the deliverable, I am confident that the individual requirements were a good start-point. This was partly due to my group's decision to first work on the group tasks, which provided me with a solid understanding of the project background. I approached the tasks in a systematic and methodical manner, which allowed me to complete them without encountering any significant obstacles. Overall, I am satisfied with my performance and believe that my approach was effective in achieving the desired outcome.
