Individual Analysis Report, Deliverable 01

Group: C1.01.02

Repository: https://github.com/JMGarCas/Acme-L3

Student #1

ID: 77979757M
UVUS: enrcabmun
Name: Caballero Muñoz, Enrique
Roles: manager, developer, tester

Table of Contents

Executive Summary

This analysis report by Enrique Caballero Muñoz covers the individual work of Deliverable 01 for workgroup C1.01.02. The report focuses on the functional requirement of the deliverable, specifically the modification of the anonymous menu to include the author's DNI, full name, and a link to their favorite website. The report includes a detailed explanation of the modifications made and the structure of the project, as well as conclusions about the task's usefulness as a tutorial and its potential for providing feedback to course members.

Revision Table

Version	Date	Description
1	14/02/2023	Initial drafting of the analysis report.

Introduction

This document will serve as the analysis report of the individual work of Deliverable 01 for workgroup C1.01.02. Author is Enrique Caballero Muñoz, and we will list and analyze the most prominent requirements for this deliverable, excluding those related to reports due to redundancy.

This analysis report consists of a listing of analysis records, each of which include the following data: a verbatim copy of the requirement to which the record refers; detailed conclusions from the analysis and decisions made to mend the requirement. Furthermore, validation from a lecturer will be linked when the lecturer's additional insights are required.

This report is separated into: 'table of contents', which works as an index to move around the document; 'table of revisions', which lists every version and changes that this document has gone through; 'content', where the main requirements from the deliverable will be analyzed, explained and will receive a detailed conclusion; 'conclusions', where we will arrive to an ending section where we look back upon the deliverable itself; and 'bibliography', where the sources employed for the realization of this document will be listed.

Contents

Functional requirements

1) **Modify the anonymous menu so that it shows an option that takes the browser to the home page of your favourite web site. The title must read as follows: "⟨id-number⟩: ⟨surname⟩, ⟨name⟩", where "⟨id-number⟩" denotes your DNI, NIE, or passport number, "⟨surname⟩" denotes your surname/s, and "⟨name⟩" denotes your name/s.**

During the lecture where the presentation 'S04 - Getting Started' was taught, we were given an explanation of the project's structure. This helped us understand what each folder contains, what purpose their contents serve and how they can be modified.

For this functional requirement, we were required to modify a few files inside the 'WEB-INF' folder, which is also contained inside 'src/main/webapp'. Once we navigate through 'views' and then 'fragments', we can find the files we are required to modify. 'menu-en.i18n' and 'menu-es.i18n' were modified to add a new listing to the anonymous menu, where I gave my DNI and full name. Then, inside of menu.jsp, the link associated with that menu suboption is found, where I provided my favorite website (in this case, my GitHub account profile).

Conclusions

We've familiarized ourselves further with the structure of the project thanks to the recent lessons and the functional requirement we've had to work on. It's a simple task, but encourages the Acme L3 developers to look into the folders and structure so that they adapt to the new working environment, as well as serving as a tutorial of sorts..

Furthermore, it's a good starting point to get acquaintanced with how the course and future deliverables will work throughout the semester. Not only that, but the members of the project will be provided helpful feedback on the deliverables and reports, improving their grasp on the process and subject altogether.
